

CHLOR-A-FOAM™

THE ULTIMATE **DETERGENT** FACILITY HYGIENE TECHNOLOGY Improving Animal Wellness Through Optimized Facility Hygiene

Acephsis™ CHLOR-A-FOAM™ is an ultra-concentrated alkaline foam cleaning detergent, designed for use in the most challenging manual cleaning applications. Using an 11 - 13 pH, the detergent contains powerful facility cleaning and hygiene agents. **CHLOR-A-FOAM™** attacks the toughest soil conditions, lifting the soil from a specified surface. A key element in the removal of dangerous biofilms from the targeted surfaces.

Biosecurity

BIOSECURITY Biosecurity is a set of practices employed to prevent the importation, and / or exportation of infectious organisms into a herd or flock, and their transmission between animals. As animal group sizes increase and as animals are placed in more intensive housing, it is easier for infectious diseases to enter and spread throughout the animal population.

Animal Wellness

ANIMAL WELLNESS Animal wellness is a function of many environmental variables, including physical surroundings. Components to be taken into account include temperature, humidity, light, air quality, space (including complexity of space), nutritional factors, facility hygiene and water hygiene.

Facility Hygiene

FACILITY HYGIENE BEST PRACTICES Optimal hygiene requires the proper steps to provide the highest level of protection against the spread of disease-causing organisms. Key "Best Hygiene Practices" require:

- The development of a facility specific hygiene program
- Addressing cleaning and disinfection practices and procedures
- Monitoring facility "animal wellness" results, documenting facility morbidity and mortality levels
